

1.9505.84.X.IS

**PROGRESSIVE WALL MIXER AND SPOUT
INSTALLATION INSTRUCTIONS**

Brodware

IC1950584XIS

IMPORTANT INFORMATION:

- For servicing the cartridge, isolate the water supply, remove the handle, remove the locknut from on top of the cartridge and remove the cartridge. Do not overtighten the locknut when reinstalling. The locknut should be tightened firmly, but not excessively.
- All tapware and plumbing must be tested for leaks and functionality before sheeting off / concealing the wall as per AS3500. This includes independently testing the hot and cold operation of the mixer.
- Water pressure must not exceed 500kpa as per AS3500, or the product warranty will be void.
- Pressure difference between hot and cold must not exceed 150kpa.
- This product is designed to work on high pressure systems only.
- Before sheeting the walls it is important that the system is checked for water hammer. If water hammer is apparent, all possible measures are to be taken, including but not limited to ensure pipework is correctly secured, keeping the length of the pipework from the outlet as short as possible, and the fitting of outlets which have a high star rating. Ensure that water pressure is not exceeding 500kpa, ensuring the correct pipe size is installed. Install an air chamber or water hammer arrestor if required.
- Ensure wall sheets and tiles are installed as close to the waterproofing sleeve as possible.
- Ensure waterproofing sleeve is not deformed. If the waterproofing sleeve is deformed by wall linings, the trim kit will not be able to be installed.

WALL MOUNTED PROGRESSIVE MIXER COMBINATION SET - INSTALLATION GUIDE

ROUGH IN PROCESS

1. Set-back for rough in of the mixer body assembly is 63-75mm, from the back of the mixer body assembly to the finished wall face (Fig.B). NOTE: If the optional 1.9305.BK.0.00 Adjustable Install Kit is being used, add 2mm to the set-back to accommodate the kit.
2. As per Fig. B, the hot inlet port is on the bottom left, the cold inlet port is on the bottom right, and the outlet port is to the left.
3. Remove the insulation. Secure the assembly to a noggin in the desired installation location and position by screwing through the 4 black rubber bushes on each corner of the mounting plate. We suggest using a pan head screw with a loose washer (Fig.A).
4. Flush water Lines. Connect plumbing to mixer body. Ensure the mixer cartridge locknut is tight. Test as per AS3500. Check for leaks. (If water hammer is apparent, please refer to the "IMPORTANT INFORMATION" section of this instruction booklet)
5. Refit the insulation. Ensure the waterproofing sleeve is screwed down fully over the o-ring to ensure a positive seal. Press the sleeve cap into the waterproofing sleeve (Fig. B).
6. Sheet the wall. Waterproof to the waterproofing sleeve. Waterproofing membrane should be applied on both sides of the waterproofing aid supplied. **NOTE: the waterproofing aid is optional for installation. Assess if this should be used on your installation. All waterproofing liability is with the installer.**
7. Finish concealing the wall.

FINAL FIT OFF PROCESS

1. Cut down the waterproofing sleeve flush with the finished wall face (Fig.D). Hold the waterproofing sleeve in position while cutting, to ensure that the waterproofing sleeve does not unscrew from inside the wall. Apply silicone between the waterproofing sleeve and the wall face.
2. Trail fit handle
 - a) Insert either the short or long handle bush onto the mixer cartridge. Secure the handle bush to the cartridge with the washer and screw provided.
 - b) Insert the friction ring into the back of the handle. Place the friction ring and handle onto the handle bush.
 - c) If there is a gap between the friction ring and the finished wall face, measure the gap. Remove the handle bush from the cartridge. Cut down the handle bush to suit your installation. Refit and trail fit. Repeat the process until the friction ring and handle are flush with the wall.
3. Ensure the mixer cartridge is fully rotated anti-clockwise to the off position. Place handle onto handle bush. Line up the grub screw hole on the handle with the bottom key slot on handle bush. Secure the handle to the handle bush using the grub screw and allen key provided.
4. Ensure the mixer cartridge is fully rotated anti-clockwise to the off position. Place handle onto handle bush. Line up the grub screw hole on the handle with the bottom key slot on handle bush. Secure the handle to the handle bush using the grub screw and allen key provided.
5. Test the operation of the handle. If the handle is tight with operating, back the handle off the slightly. Test for leaks. Repeat until satisfied.
6. Press fit spout trim onto the $\frac{1}{2}$ " male thread outlet, or slide it over the $\frac{1}{2}$ " male thread outlet(depending on model).
7. Apply thread tape to the $\frac{1}{2}$ " male thread outlet port on the wall, and screw the spout onto the thread until the spout is sitting flush against the wall face.
8. Test the operation of the handle and check for leaks.
